EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Applicant's Attorney, Diallo T. Crenshaw (52, 778) on 02/26/09.

2. The claims have been amended as shown in Attachment A.
3. **Claims 1-3 and 5-11** are allowed.
4. The following is an examiner's statement of reasons for allowance:

Claims 1-3 are allowable over the prior art of record since the cited references taken individually or in combination fail to particularly teach or suggest a method of allocating an Internet Protocol (IP) address and detecting duplication of the IP address in a network environment, comprising the steps of:

allocating an initial IP address to a terminal by the terminal;

sending and receiving broadcast messages;

detecting duplication of the IP address while sending and receiving the broadcast messages;

updating a Duplicate Address Detection (DAD) table through searches of a DAD table and a history table; and

determining whether a collision of the IP address occurs using a DAD timer handler.

wherein the broadcast messages are one-hop broadcast messages, and each entry of the Duplicate Address Detection (DAD) table is periodically updated by the one-hop broadcast messages,

wherein each entry of the DAD table includes an IP address of at least one of a plurality of terminals in a network, a sequence number of the at least one of the plurality of terminals, a temporary ID of the at least one of the plurality of terminals and a flag, and

wherein the history table stores a latest sequence number and temporary ID generated by a present terminal.

Claims 5-11 are allowable over the prior art of record since the cited references taken individually or in combination fail to particularly teach or suggest a method of allocating an Internet Protocol (IP) address and detecting duplication of the IP address in a network environment, comprising the steps:

- (a) initially allocating a tentative IP address to a terminal, by the terminal;
- (b) determining whether the tentative IP address can be used by the terminal;
- (c) comparing the tentative IP address with at least one other IP address;
- (d) if the tentative IP address has a duplicate, selecting an advisory IP address that does not exist;
- (e) sending the advisory IP address to the terminal;
- (f) performing step (b) using the advisory IP address as the tentative IP address wherein the at least one other IP address is located in a Duplicate Address Detection (DAD) table, and

wherein each entry of the Duplicate Address Detection (DAD) table is periodically updated by a one-hop broadcast message.

wherein said each entry of the DAD table includes an IP address of at least one of a plurality of terminals in a network, a sequence number of the at least one of the plurality of terminals, a temporary ID of the at least one of the plurality of terminals and a flag, and

wherein a history table stores a latest sequence number and temporary ID generated by a present terminal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
